

Belkasoft Evidence Center 2012 Offers Faster Forensic Investigations with Less Missed Evidence

Belkasoft announces a major update to its flagship forensic product, Belkasoft Evidence Center. The new version 2012 will help forensic specialists solve cases faster, investigating more data with less missed evidence. Belkasoft Evidence Center 2012 enhances collaboration features available in the Enterprise edition, allowing investigators sharing case data in a central database.

Less Missed Evidence

Belkasoft Evidence Center 2012 can locate more evidence than ever. Even items stored in unusual place, saved in unusual format or produced by exotic software can be located and analyzed. Examples of such exotic products would be Snak or ooVoo chat software, among dozens of other tools that even the most experienced specialists may have never encountered before. The latest release of Belkasoft Evidence Center supports more than 60 instant messengers for the PC and Mac platforms.

Belkasoft Evidence Center 2012 sports comprehensive analysis that can extract information from existing files, carve deleted data, perform Live RAM analysis, and investigate the content of paging and hibernation files. In addition, Belkasoft Evidence Center 2012 can perform network traffic analysis by analyzing PCAP files.

Forensics Made Easier

Belkasoft Evidence Center 2012 makes forensic investigations easier than ever before. Automating evidence search, extraction and analysis, Belkasoft Evidence Center 2012 supports dozens of popular, uncommon and outright exotic chat applications, social networks, Web browsers, email clients, audio and video formats. With its intuitive user interface, more than 70 artifacts can be located out of the box with just a few clicks.

Collaboration Support

Introduced in the Enterprise edition of Belkasoft Evidence Center 2012, collaboration support allows forensic specialists sharing case data. The new feature set promotes collaborative work, offering centralized storage for all collected evidence and raw data. Sensitive information is securely protected with permission-based access restrictions.

Thanks to the client-server collaboration model, users of Belkasoft Evidence Center 2012 Enterprise Edition have an option to use their own PCs to work on a case together while storing and accessing case data on a centralized server.

About Belkasoft Evidence Center

At version 2012, the company's flagship computer forensic tool enables security and forensic specialists collect and analyze more digital evidence than ever. Belkasoft Evidence Center will automatically locate, process and analyze Internet chat logs, Web browsing history and email

communications including information stored in cookies and digital pictures, mailboxes and system files. Low-level access to hard disk and system structures means that even data that has been deleted by a suspect cannot escape from investigators.

Belkasoft Evidence Center makes evidence analysis easier by natively mounting and access images created with Encase, DD, and SMART without using these or any third-party tools.

The affordable Standard edition is available to private investigators and corporate security departments, while the more comprehensive Enterprise edition allows major security agencies and police departments to have multiple investigators work simultaneously on a case.

Pricing and Availability

Belkasoft Evidence Center 2012 is available immediately. Pricing for Forensic IM Analyzer edition starts from \$499.95, while the Enterprise edition is available from \$9999.95. Current customers having valid (unexpired) licenses may upgrade to the new product for free.

About Belkasoft

Founded in 2002, Belkasoft is an independent software vendor specializing in computer forensics and IT security software. Running on the Microsoft Windows platform, Belkasoft products back the company's "Forensics made easier" slogan, offering IT security experts and forensic investigators solutions that work right out of the box, without requiring a steep learning curve or any specific skills to operate.

Belkasoft Evidence Center 2012 replaces all Forensic IM Analyzer, Forensic Studio, Forensic Carver, Browser Analyzer and other Belkasoft products used in forensic investigations, law enforcement, intelligence, corporate security and parental control applications by integrating their functionality into a single all-in-one product. Registered users of the above products may be eligible for a free upgrade.

Belkasoft customers include the FBI, US Army, US Secret Service, police departments in Germany, Norway, Australia, and New Zealand, PricewaterhouseCoopers, and Ernst & Young.

More information about the company and its products is available at <http://belkasoft.com>.
